

AviTrac

Avian
Acoustic
Deterrent

**Bird control solutions
for professional buildings and
commercial premises**

Protected area: over 200 x 200 m

Acoustic power: 120 dB μ Pa @ 1 m

Protection class: IP55

Advanced programming

- Sound intensity
- Type of scaring signals
- Operating times and interval
- Ambient light detector

Large library of 150 scaring signals

- Natural predator calls
- Physiological disturbance signals
- Distress calls from target species

**Can be adapted to a remote triggering system
or be coupled with a visual option.**

**Patented sound
diffusion technology**

**Several options
Highly versatile**

**Robust device and
low maintenance**

**Expandable and
scalable system**

BirdProTech is a brand of the company AgriProTech

Our solutions are designed to protect sensitive operations from potential damage caused by birds and wildlife. Our range of solutions uses the latest acoustic, visual and laser technologies.

Options available

Several models depending on the area to be covered:

- AviTrac® AVT 9M: 100 x 200 metres
- AviTrac® AVT 18M : 175 x 175 metres
- AviTrac® AVT 18S: 200 x 200 metres

Red or yellow ManTrac® visual option
WiTrac® remote triggering system

Rechargeable Lithium Iron Phosphate LiFePO4 or
lead-acid PbSO4 battery
Solar panel
Mains power supply

Typical configuration

In an industrial area with no residential buildings within a 500 metre radius, there is a roof where seagulls have found a nesting site.

To deter these birds and reduce potential disturbance, an AviTrac® AVT18S acoustic bird repeller was strategically installed on the roof before the start of the breeding season.

This deterrent system is enhanced by the addition of the red ManTrac® visual option, which complements the acoustic repeller with a visual deterrent. The system is powered by a 10W solar panel, making it fully autonomous and environmentally sustainable.
